

## CONFIGURATION

<code>/etc/</code>	All system configuration files are under directory <code>/etc/</code> .
<code>nano</code> <i>files</i>	Default text editor. If not present, try <code>emacs</code> , <code>vi</code> , <code>joe</code> .
<code>webmin</code> at <a href="https://hostname:10000">https://hostname:10000</a>	Browser interface to system configuration, access is defined in <code>/etc/webmin/miniserv.conf</code> .
<code>CUPS</code> at <a href="http://hostname:631">http://hostname:631</a>	Browser interface to printing system.
<code>dpkg-reconfigure</code> <i>package-name</i>	Reconfigure a package, e.g. <code>console-common</code> (keyboard), <code>locales</code> (localisation).
<code>update-alternatives</code> <i>options</i>	Manage command alternatives.
<code>update-grub</code>	After installing a new kernel.
<code>make-kpkg --initrd --revision=2:my.1.0 --rootcmd fakeroot --uc --us kernel-image</code>	Build a kernel packages from sources, if a customised kernel is really needed, needs <code>kernel-package</code> .
<code>m-a</code> <i>a-i</i> module <code>kernel_image</code>	Create and install third-party modules (nvidia, ...), needs <code>module-assistant</code> .
<b>DAEMONS AND SYSTEM</b>	
<code>/etc/init.d/file restart</code>	Restart a service, system daemon.
<code>/etc/init.d/file stop</code>	Stop a service, system daemon.
<code>/etc/init.d/file start</code>	Start a service, system daemon.
halt, reboot, poweroff	Halts, reboots, shuts down system.
<code>/var/log/</code>	All log files are under this directory.
<code>/etc/default/</code>	Default values for many daemons and services.

## IMPORTANT SHELL COMMANDS

<code>cat</code> <i>files</i>	Print files to screen.
<code>cd</code> <i>directory</i>	Change to directory.
<code>cp</code> <i>file1 file2</i>	Copy files and directories.
<code>echo</code> <i>string</i>	Echo string to screen.
<code>gzip, bzip2 [-d] files</code>	Compress, uncompress files.
<code>less</code> <i>files</i>	Show contents of files. Better than <code>more</code> .
<code>ls [files]</code>	List files.
<code>mkdir</code>	Create directories.
<code>directory-names</code>	
<code>mv</code> <i>file1 file2</i>	Move, rename files.
<code>rm</code> <i>files</i>	Remove files.
<code>rmdir</code> <i>dirs</i>	Remove empty directories.
<code>tar [c][x][t][z][j] -f file.tar [files]</code>	Create, extract, list Table of archive file, z, j for .gz, .bz2.
<code>find</code> <i>directories</i>	Find files like <code>-name name</code> or <code>-size +1000</code> , etc.
<code>grep</code> <i>search-string files</i>	Find search-string in files.
<code>kill [-9]number</code>	Send signal to process (e.g. terminate it).
<code>ln -s</code> <i>file1 file2</i>	Create a symbolic link to a file.
<code>ps [options]</code>	Show current processes.
<code>su - [username]</code>	Become another user, e.g. <code>root</code> .
<code>sudo</code> <i>command</i>	Execute a command as <code>root</code> as normal user, permissions are defined in <code>/etc/sudoers</code> .
<code>command &gt;file</code>	Overwrite file with output of command.
<code>command &gt;&gt;file</code>	Append output of command to file.
<code>cmd1   cmd2</code>	Use output of command 1 as input of command 2.
<code>command &lt;file</code>	Use file as input for command.
<code>lsof</code>	

## APT

<code>apt-get update</code>	Update packages listings from package repositories as listed in <code>/etc/apt/sources.list</code> . Run, if the contents of one of repositories, the file changed, or if unsure.
<code>apt-cache search</code> <i>search-string</i>	Search packages and descriptions for <code>search-string</code> .
<code>apt-cache policy</code> <i>package-names</i>	Show versions and priorities of available packages.
<code>apt-cache show</code> <i>package-names</i>	Show package information incl. description.
<code>apt-cache showpkg</code> <i>package-names</i>	Show package dependencies (needed packages).
<code>apt-get install</code> <i>package-names</i>	Install packages from repositories with all dependencies.
<code>apt-get upgrade</code>	Install newest versions of all packages currently installed.
<code>apt-get dist-upgrade</code>	Like <code>apt-get upgrade</code> , but with advanced conflict resolution.
<code>apt-get remove</code> <i>package-names</i>	Remove packages with all needed packages.
<code>apt-cache depends</code> <i>package-names</i>	List all packages needed by the given.
<code>apt-cache rdepends</code> <i>package-names</i>	List all packages that need the given.
<code>apt-file update</code>	Update content listings from package repositories, see <code>apt-get update</code>
<code>apt-file search</code> <i>file-name</i>	Search packages for file.
<code>apt-file list</code> <i>package-name</i>	List contents of a package.
<code>auto-apt</code>	Installs packages automatically if needed, can replace <code>apt-file</code> , needs <code>auto-apt</code> .
<code>aptitude</code>	Console interface to APT, needs <code>aptitude</code> .
<code>synaptic</code>	GUI interface to APT, needs <code>synaptic</code> .

## Debian GNU/Linux Reference Card

Version 0.8pre, 2004-04-2x

<http://www.debian.org/>

### GETTING HELP

<code>man command</code>	Read online help for command. Every command and many configuration files have manual pages, <b>man bash</b> for builtins.
<code>command [--help, -h]</code>	Brief help for most commands.
<code>/usr/share/doc/ [package-name/]</code>	Find all documentation here, optional file <b>README.Debian</b> contains specifics.
<code>Web documentation</code>	Reference, manuals, FAQs, HOWTOs, etc. at <a href="http://www.debian.org/doc/">http://www.debian.org/doc/</a>
<code>Mailing lists</code>	The community is always helpful, look for the <b>users</b> mailing lists at <a href="http://lists.debian.org/">http://lists.debian.org/</a>

### INSTALLATION

<code>Installer</code>	All information about it at <a href="http://www.debian.org/devel/debian-installer/">http://www.debian.org/devel/debian-installer/</a>
<code>boot: expert</code>	E.g. to set up the network w/o DHCP or using LILO instead of GRUB.

### BUGS

<code>Tracking</code>	Find out about existing and fixed bugs at <a href="http://bugs.debian.org/">http://bugs.debian.org/</a>
<code>Package specific</code>	See <a href="http://bugs.debian.org/package-name/">http://bugs.debian.org/package-name/</a> , use <b>wnpp</b> to ask for new packages.
<code>reportbug</code>	Report a bug by e-mail.
<code>Reporting</code>	Instructions at <a href="http://www.debian.org/Bugs/Reporting">http://www.debian.org/Bugs/Reporting</a>

### Legal Notice

This document may be used under the terms the GNU General Public License version 2 or higher. Conditions for copying and translations can be found at <http://people.debian.org/~debacle/refcard/>, where you can always get the latest version of the reference card.

DPKG	
<code>dpkg -l [names]</code>	List packages.
<code>dpkg -I pkg.deb</code>	Show package information.
<code>dpkg -c pkg.deb</code>	List contents of package file.
<code>dpkg -S filename</code>	Show which package a file belongs to.
<code>dpkg -i pkg.deb</code>	Install package files.
<code>deborphan</code>	Show packages, on that no other packages depend ( <i>orphans</i> ), needs <b>deborphan</b> .
<code>debsums</code>	Audit check sums of installed packages, needs <b>debsums</b> .
<code>dpkg-divert [options]file</code>	Override a package's version of a file.
<code>dpkg --compare-versions v1 gt v2</code>	Compare version numbers, check with <b>echo \$?</b> .
<code>dpkg-query -W --showformat=format</code>	Query installed packages, format e.g. '\${Package} \${Version} \${Installed-Size}\n'.
<code>dpkg --get-selections &gt; file</code>	Write package selections to file.
<code>dpkg --set-selections &lt; file</code>	Set package selections from file.

### THE NETWORK

<code>/sbin/ifconfig</code>	Configure network interfaces.
<code>/etc/network/</code>	Network configuration files, most relevant are <b>interfaces</b> and <b>options</b> .
<code>ifup, ifdown [device]</code>	Start, stop network interfaces according to files above.
<code>ssh -X user@host</code>	Login at other machine.
<code>scp files user@host:path</code>	Copy files to other machine (and vice versa).
<code>cior IOR</code>	View components of stringified CORBA IOR.
<code>nameclt list [context]</code>	List contexts and objects from CORBA Naming Service.
